1) This is how I compiled and linked my program:
   gcc –o tldmonitor tldmonitor.c date.c tldlist.c

2) Then I tested my program with small.txt:
   ./tldmonitor 01/01/2000 01/09/2013 <small.txt

3) Then I tested my program again and compared it with the expected output:
   ./tldmonitor 01/01/2000 01/09/2013 <small.txt | sort –n | diff – small.out

4) Then I tested my program with large.txt:
   ./tldmonitor 01/01/2000 01/09/2013 <large.txt

5) Then I tested my program again and compared it with the expected output:
   ./tldmonitor 01/01/2000 01/09/2013 <large.txt | sort –n | diff – large.out

6) Then I ran valgrind to ensure no memory leaks:
   valgrind ./tldmonitor 01/01/2000 01/09/2013 <small.txt ––leak–check=yes
   valgrind ./tldmonitor 01/01/2000 01/09/2013 <large.txt ––leak–check=yes
